

Before we started to make the lanterns, we sketched out our concept. We then made a prototype to work out any glitches. From the prototype, we were able to make a list of materials and work out the logistics of making multiple lanterns.

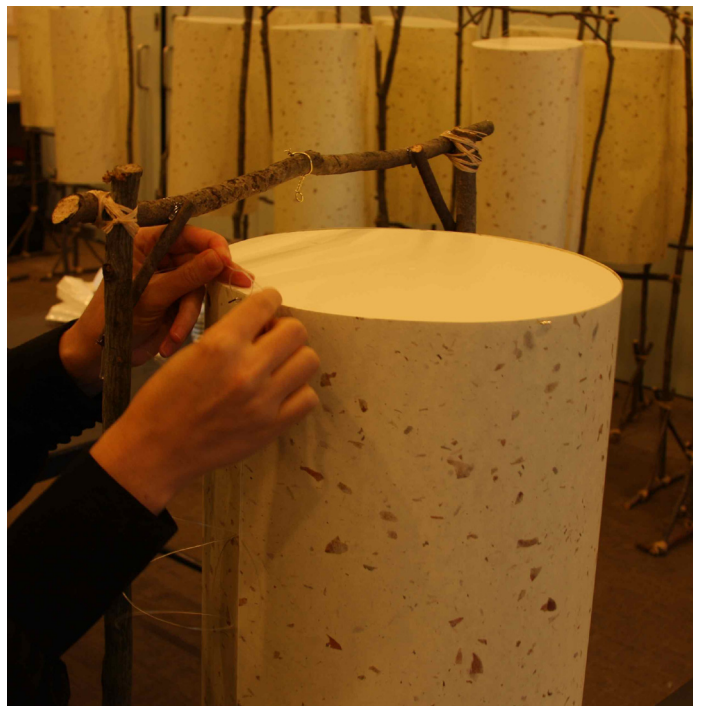

Step 1
We started by collecting the branches, each one cut to size and then bundled for organized assembly.

Step 2
With a glue gun we put together the lantern supports, wrapping the joints with raffia for extra strength.

Step 3
To create the paper lanterns we first cut foam core circles (top and bottom), then attached the paper onto the circles with "T" pins.

Step 4
After attaching battery-operated light bulbs inside the lanterns, we hung them onto the branch supports using clear fishing line.
